

HOW TO USE THE LICENSE KEY

USE LICENSE KEY IN APPLICATIONS

VaxVoIP SIP SDK provides activeX (*VaxSIPUserAgentOCX.ocx*) to add IP-Telephony features in your VB, VB.NET, C# and Delphi applications.

We recommend to use *Library (.LIB) and DLL*, if you want to add IP-Telephony features in your VC++ based applications.

Both activeX and LIB & DLL exports *SetLicenceKey()* method. Pass your License Key as a parameter to this method and call it.

e-g: SetLicenceKey("YOUR LICENSE KEY")

USE LICENSE KEY IN WEB PAGES

VaxVoIP SIP SDK provides cabinet component (*VaxSIPUserAgentCAB.cab*) in order to add IP-Telephony features in your web pages.

Adding license key in web pages is different from applications due to:

The openness of the browser (the ability to view the HTML source file)

Because any user with Internet Explorer 4.0 or later can view the HTML source code for a given Web page, and because a cabinet control is copied to a user's computer before it is displayed, a level of indirection is required to "hide" the license key for a cabinet component from the user. This prevents users from pirating and reusing controls that they did not purchase.

Cabinet component exports *SetDomainKey()* method. It requires to set domain key rather License key, please follow the steps to generate Domain key.

1. Download *DomainKey* application from the following link:

<http://www.vaxvoip.com/documentation/DomainKey.zip>

2. Unzip and execute it.

3. Enter your license key.

4. Enter the parent domain name on which you want to host your *VaxSIPUserAgentCAB* integrated web pages.

e-g: If you want to host your web pages on *www.abc.com* then enter *www.abc.com* OR if *voip.abc.com* then enter *voip.abc.com*

It does not matter, how deep is the URL:

http://www.abc.com/voip/voice/chat/internet/SipPhone.htm OR

http://voip.abc.com/phone/voip/voice/chat/internet/SipPhone.htm

Enter the parent domain name only: *www.abc.com* OR *voip.abc.com*

5. Click the Generate Domain Key button.
6. *VaxSIPDomainKey* application will generate the ENCRYPTED domain key for *www.abc.com* domain.

Pass the ENCRYPTED domain key to *SetDomainKey()* method. It will bind the cabinet component to *www.abc.com* OR *voip.abc.com* domain and user will not be able to view your license key.

Please email us at *support@vaxvoip.com* incase of any questions.
