

HOW TO USE THE LICENSE KEY

USE LICENSE KEY WITH iOS (iPhone/iPad) Phone SDK

VaxVoIP SIP iOS SDK provides objective C++ library and header files (.a & .h) to develop SIP based softphone and add IP-Telephony feature using XCode 4.0 or above development tool.

1. Download the iServerKey application from the following link:
<http://www.vaxvoip.com/PhoneSDK/documentation/ServerKeyiOS.zip>
2. Generate SERVER KEY with your LICENSE KEY.
3. Use that SERVER KEY in your project.

e.g. SetLicenceKey("YOUR SERVER KEY")

USE LICENSE KEY WITH ANDROID Phone SDK

VaxVoIP SIP Android SDK provides library (.so) and java files (.java) to develop SIP based softphone and add IP-Telephony feature using Eclipse IDE for Java development tool.

1. Download the ServerKeyAndroid application from the following link:
<http://www.vaxvoip.com/PhoneSDK/documentation/ServerKeyAndroid.zip>
2. Generate SERVER KEY with your LICENSE KEY.
3. Use that SERVER KEY in your project.

e.g. SetLicenceKey("YOUR SERVER KEY")

USE LICENSE KEY WITH MS WINDOWS Phone SDK (APPLICATION)

VaxVoIP SIP SDK provides COM component (*VaxSIPUserAgentCOM.dll*) to add IP-Telephony features in your VB, VB.NET, C# and Delphi applications.

It is recommended to use *Library (.LIB) and DLL*, if you want to add IP-Telephony features in your VC++ based applications.

1. Download the FileBind application from the following link:
<http://www.vaxvoip.com/PhoneSDK/documentation/FileBindwOS.zip>
2. Execute the FileBind application.
3. Follow the instructions.

USE LICENSE KEY WITH PHONE SDK (WEB PAGES)

VaxVoIP SIP SDK provides web-plugin to add IP-Telephony features in your web pages.

Adding license key in web pages is different from applications due to:

THE OPENNESS OF THE BROWSER (ABILITY TO VIEW THE HTML SOURCE)

Because any user using web browser can view the HTML source code of a Web page and because a web-plugin is copied to a user's computer before it is displayed, a level of indirection is required to "hide" the license key for a web-plugin from the user. This prevents users from pirating and reusing web-plugin that they did not purchase.

VaxVoIP web-plugin exports *SetDomainKey()* method. It requires to use domain key rather License key, please follow the steps and generate Domain key.

1. Download *DomainKey* application from the following link:
<http://www.vaxvoip.com/PhoneSDK/documentation/DomainKey.zip>
2. Unzip and execute it.
3. Enter your license key.
4. Enter web URL's domain name on which you host your web pages.

e.g. If you host your webphone on *www.abc.com* then enter *www.abc.com* OR if *voip.abc.com* then enter *voip.abc.com*

It does not matter, how deep is the URL:
http://www.abc.com/voip/voice/chat/internet/SipPhone.htm OR
http://voip.abc.com/phone/voip/voice/chat/internet/SipPhone.htm

5. Follow the instructions.

Please email us at **support@vaxvoip.com** incase of any questions.
